How to Lock the Cam Fittings

Step 1:

Screw cam bolt A into the indicated small pre-drilled hole until its shoulder is seated. Do not overtighten.

Step 2:

Insert cam lock B into the large round hole. Point the arrow/opening on the cam toward the hole where cam bolt A will enter.

Step 3:

Bring the panels together so the head of cam bolt A slides fully into cam lock B.

Step 4:

Turn cam lock B clockwise with a Phillips-head screwdriver until the joint is secure, usually about one-half turn. Stop when resistance is felt.

Cam Fitting Check

If a cam will not turn, do not force it. Separate the panels and confirm the cam arrow is facing the cam bolt entry hole and that the bolt is screwed to the correct depth.
